%
%       MMIX assembly code for low level routines of
%       fast arbitrary precision arithmetic of natural numbers.
%
%       Arbitrary precision natural numbers are represented as a
%       sequence of words.
%
%       A word is an octabyte on MMIX. The most significant word is
%       on the highest address, and it is always supposed to be non-zero.
%
%       Running times here are the running time of the routine,
%       without the setting up of parameters by callee routine
%       and the time of the POP instruction for return.
%
%       Code length is the number of tetras for the routine, not
%       counting (one) POP instruction for return.
%
